PROFESSIONAL SUMMARY

Enterprise program manager with 15+ years designing the operating systems that product and engineering organizations run on - NPI operations frameworks, intake models, prioritization criteria, SLAs, escalation paths, and launch readiness criteria enabling cross-functional execution at scale. At AltaGas, designed the EAM Operating Model from blank page: role accountabilities, design tenets, and the service model defining how demand flows from business request to delivered capability. At TC Energy, built the investment governance framework covering demand intake, business case evaluation, funding decisions, and delivery oversight for a \$9M-\$15M annual portfolio - then built and mentored the PM team that operated inside it, including defining the PM career ladder. Deep IAM and integration background from enterprise Maximo environments: business analyst for SSO implementation, functional BA for API integrations via the Maximo Integration Framework (MIF), and currently leading security group rationalization using complex SQL to identify and resolve overlapping roles across enterprise access groups. Holds a BSc in Computer Science - engages engineering teams directly and translates across technical and business contexts.

CORE COMPETENCIES

NPI Operations & Operating Model Design (Intake, SLAs, Escalation Paths, Ecosystem Readiness)

Cross-Functional Program Management & Delivery GovernanceEnterprise IAM / Security Group Design & Rationalization (SQL)

API Integration (Maximo Integration Framework / MIF)SSO Implementation (Business Analyst)

Launch Readiness, "Ecosystem Ready" Criteria & Cross-Functional Delivery Coordination

PM Team Development & Operating Model Design (11 PMs mentored)Portfolio & Program Management (\$9M-\$15M+)

Azure DevOps | Power BI | Power Apps | SAP | Maximo (MAS)C# & SQL (Developer Background)

Executive Stakeholder Alignment (VP / GM / Director)Agile & Hybrid Delivery Frameworks

WORK EXPERIENCE

AltaGas Ltd.

April 2025 - Present

Lead, Business Solutions | Product Strategy · Calgary, AB

- Designed the EAM Operating Model from blank page - defined role accountabilities, nine design tenets governing how technical decisions are made, and a service model clarifying how demand flows from business request to delivery; adopted across a four-subsiary program
- Operationalized a delivery framework in Azure DevOps defining a five-level work hierarchy (Epics → Features → User Stories → Test Cases → Defects), traceability standards, and outcome-based "ecosystem ready" launch criteria - providing consistent launch readiness signal from strategic initiative through to tested deliverable
- Leading enterprise security group rationalization - using complex SQL queries to identify overlapping role assignments across groups, mapping access patterns to job functions, and redesigning security architecture to align entitlements with actual business roles
- Served as business analyst for SSO implementation and API integrations via the Maximo Integration Framework (MIF) - defining integration requirements, data mappings, and functional specifications bridging Maximo and enterprise systems
- Drove three binary platform decisions through executive SteerCo using a structured decision facilitation framework - unblocked a platform migration that had stalled since 2022
- Led a cross-functional delivery team through a period where demand tripled while team capacity dropped from 9 to 4 - maintained delivery quality through backlog prioritization, intake governance, and stakeholder alignment

TC Energy

August 2021 - September 2024

Liquids Portfolio Product Manager | Customer Engagement & Product Strategy · Calgary, AB

- Designed and operated an investment governance framework covering demand intake, business case evaluation, funding decisions, and delivery oversight - defining intake SLAs, prioritization criteria, escalation paths, and reporting cadences that gave leadership consistent visibility from initial request through funded execution
- Built the PM function - defined the operating model, PM career ladder, and intake/escalation processes; developed and influenced 11 Product Managers; elevated PM credibility with VP and General Manager-level leadership
- Served as the single PM accountable for the entire Liquids Business Unit - individual product managers owning capability lines (Work Management, Supply Chain, Engineering, Reliability, Commercial) operated within and reported into the BU-level strategic roadmap
- Conducted quantitative workload analytics across the PM function - mapped initiative volume, complexity, and stakeholder demand by product line to identify capacity imbalances and drive team restructuring; defined "ecosystem ready" criteria for each capability area to ensure cross-functional launch readiness
- Designed an integrated planning approach connecting demand intake, budgeting, and project execution data across Power Apps, SAP, and Power BI
- Recommended migrating from the planned AWS and SAP architecture to Azure and Dynamics 365 for the Southbow spinoff; recommendation accepted and became the platform direction for the 600-person company

222529 Alberta Inc. (Independent Consulting Practice)

November 2019 - August 2021

Director, Business Analysis Consulting | Digital Transformation Programs

- Designed intake and evaluation frameworks for digital transformation initiatives - defining prioritization models, business case structures, and go/no-go criteria for a \$14M portfolio of proof-of-concept investments
- Facilitated alignment between operational stakeholders and technology teams - bridging implementation reality and strategic objectives to ensure cross-functional ownership before programs launched

Keyera Corporation

July 2014 - November 2019

Senior Business Analyst / Program Lead | Enterprise Asset Management & Reliability Program · Calgary, AB

- Served as business analyst for Maximo platform integrations - defined integration requirements, data flows, and functional specifications for connections between Maximo and enterprise ERP, financial, and operational systems
- Led requirements gathering and future-state process design across work management, reliability, and asset lifecycle - facilitating cross-functional workshops and designing the intake and prioritization patterns for how work moved through each workflow
- Proposed and drove the formation of a capability-based EAM team - grew from 3 to approximately 10 people; designed role definitions, team operating model, and accountabilities from blank page

Team Lead, Maximo Support

2012 - 2014

- Designed support intake, prioritization, and escalation processes; built SLA definitions and the operating model for how demand entered and was tracked through the function

Shell Canada Ltd.

2012 - 2013

Service Operations Management Analyst

- Developed KPI frameworks and SLA reporting for a service operations function - built performance measurement from scratch and presented findings to leadership

Husky Energy

2012

Software Developer

- Designed and developed a GIS job tracking workflow application in C# with a custom SQL database - full end-to-end from requirements through deployment

EDUCATION

Bachelor of Science, Computer Science

University of Manitoba

Certificate, Product Management
