PROFESSIONAL SUMMARY

Digital product leader with 14+ years building enterprise digital products in Canada's most heavily regulated industries - energy infrastructure, industrial operations, and asset-intensive environments where compliance is a design constraint, not an afterthought. Owns the full digital product lifecycle - discovery, product strategy, roadmap, backlog management, delivery, adoption, and optimization - across suites of enterprise digital products. Player/coach: built and matured the PM function at a major Canadian pipeline company, grew a digital product team from 3 to 10 people, and consistently developed PMs and practitioners alongside owning product strategy. Brings data-driven decision-making to product health (behavioral analytics, adoption metrics, portfolio performance) and a disciplined approach to investment governance and budget management. Holds a BSc in Computer Science, enabling direct engagement with engineering and architecture teams without a translation layer. Regulated industry product discipline is transferable across sectors - the specific regulations change; the approach to building products that embed compliance requirements is the same.

CORE COMPETENCIES

Digital Product Management & Product Suite Strategy

Product Lifecycle (Discovery → Roadmap → Delivery → Adoption → Optimization)

Agile & Scrum | Backlog Management & User Stories

Player/Coach Product Leadership & PM Team Development

Product Strategy, Vision & Multi-Year Roadmaps

Data-Driven Product Decisions & Behavioral Analytics

Investment Governance & Portfolio Budget Management (\$9M-\$15M+)

Cross-Functional Stakeholder Alignment (VP / GM / C-Suite / SteerCo)

Enterprise Digital Products & Platform Management

Regulated & Compliance-Driven Product Design (Energy: AER, CER, HSE)

Azure DevOps | Power BI | Power Apps | SAP | Maximo / MAS

Business Case Development & Financial Modeling

WORK EXPERIENCE

Lead, Digital Product Strategy | Business Solutions - Calgary, AB

- Led a multi-disciplinary digital product team (Business Analysts, Functional Analysts, Data Analysts, Systems Analysts, Developers) through a period of tripled demand with capacity reduced from 9 to 4 - maintained delivery quality, backlog prioritization discipline, and executive confidence through structured intake governance and stakeholder alignment
- Defined a 3-year Digital Product Capabilities Roadmap spanning 8 capability domains (Work Management, Asset Lifecycle, Supply Chain, Inventory Management, Operations Management, Health Safety & Environment, Planning & Scheduling, Reliability & Maintenance) and 4 delivery workstreams - adopted as the governing product direction for the enterprise platform implementation
- Established a delivery framework in Azure DevOps defining a five-level work hierarchy (Epics → Features → User Stories → Test Cases → Defects), backlog standards, traceability requirements, and outcome-based metrics - providing consistent visibility from strategic initiative through to tested deliverable
- Designed a three-tier product governance structure (Strategic Leadership Council, Program Leadership Council, Technical Advisory Council) with defined decision rights, accountability, and operating cadence - adopted across AltaGas, WGL, Semco Energy, and Petrogas as the product investment governance model
- Defined product adoption metrics (506 active users, 82 average daily logins) and presented adoption gaps as enterprise investment risk - linking digital product underperformance to organizational, technical, and process root causes requiring strategic response
- Built and presented the business case for digital product governance to executive leadership - connecting delivery capability gaps, technical debt, and platform adoption risk to measurable enterprise risk across four subsidiaries; secured organizational commitment to governance restructuring
- Facilitated executive decision-making on major platform migration - structured complex hosting, implementation, and migration decisions into three independent binary choices; drove SteerCo alignment after the program had been stalled for two years
- Championed a process-first digital product philosophy - defining business outcomes, process flows, decision rights, and accountability before any system configuration or build decision, reducing rework and improving alignment between business expectations and delivered product

TC Energy

August 2021 - September 2024

Liquids Digital Product Manager | Customer Engagement & Product Strategy - Calgary, AB

- Built and matured the Digital PM function for the Liquids Business Unit - defined the operating model, established disciplined product practices (outcome-first framing, structured intake, business case rigor, backlog standards), and elevated the PM function's credibility with VP and General Manager-level leadership
- Owned digital product strategy and delivery across a \$9M-\$15M annual portfolio - the single Digital PM accountable for the entire BU's product roadmap spanning Engineering, Operations, Supply Chain, Projects, Reliability, and Commercial functions across five business units
- Built a behavioral analytics model on product adoption data - analyzed ticket volume, origin, and user demographics to discover that zero-ticket areas had access barriers and systemic distrust rather than healthy adoption; findings changed how IT leadership measured digital product health across the organization
- Designed an investment governance framework from blank page - defined intake SLAs, backlog prioritization criteria, business case standards, funding thresholds, escalation paths, and reporting cadences; gave the organization its first consistent visibility from demand intake through funded execution
- Developed commercial schedule compliance performance metrics from the ground up, giving the BU its first structured visibility into contractual delivery performance as a measurable product outcome
- Designed an integrated data approach connecting demand intake, budgeting, and execution tracking across Power Apps, SAP, and Power BI - providing end-to-end product portfolio visibility from business request to delivered outcome
- Served as Application Stream Lead on the TC Energy / Southbow spinoff - rationalized 2,000+ applications scoped for 10,000 people down to fit a 600-person company; recommended migrating from planned AWS and SAP architecture to Azure and Dynamics 365; recommendation accepted as company platform direction
- Partnered with Directors, General Managers, and Vice Presidents across five functions to evaluate, prioritize, and align competing digital product investments against strategic objectives, regulatory requirements, and resource constraints

222529 Alberta Inc. (Independent Consulting Practice)

November 2019 - August 2021

Director, Digital Product Consulting | Transformation Programs

- Built intake and evaluation frameworks for digital product investments - developed prioritization models, business case structures, and go/no-go criteria governing a \$14M portfolio of proof-of-concept initiatives
- Conducted financial modeling (ROI, NPV, cash flow) for all digital product evaluations - validated projected value against budget constraints and regulatory feasibility
- Facilitated alignment between operational stakeholders and technical delivery teams - defined pilot scope, success criteria, integration requirements, and cross-functional ownership before programs launched

Keyera Corporation

July 2014 - November 2019

Senior Business Analyst / Program Lead | Enterprise Digital Products & Reliability - Calgary, AB

- Identified fragmented ownership across digital product and platform capabilities and proposed a capability-based organizational model - brought together Business Analysts, Functional Analysts, and Technical Analysts into a unified digital product team; leadership implemented the model and it grew from 3 to approximately 10 people
- Designed role definitions, team operating model, and accountability frameworks - establishing how demand entered the function, how the backlog was prioritized and tracked, and how product outcomes were measured
- Mentored Business Analysts and practitioners in stakeholder engagement, requirements, and facilitation - building capability across the team and sustaining grassroots adoption across 26+ field sites
- Led requirements gathering and future-state process design across work management, reliability, and asset lifecycle - facilitated workshops across Operations, Engineering, Maintenance, Reliability, and IT in a heavily regulated operational environment

Team Lead, Maximo Support

2012 - 2014

- Led the product support function; designed intake, prioritization, and escalation processes; built relationships with field operations teams that transformed platform trust and user adoption

Shell Canada Ltd.

2012 - 2013

Service Operations Management Analyst

- Built KPI frameworks and performance reporting for a service operations function; identified process improvements contributing approximately \$90K in annual cost savings

EDUCATION

Bachelor of Science, Computer Science

University of Manitoba

Certificate, Product Management

SAIT
