PROFESSIONAL SUMMARY

Senior technical product manager with 15+ years building internal tools and operational technology inside complex, data-intensive organizations. Specializes in embedding with operations teams - understanding how work actually happens, identifying where manual processes create risk or inefficiency, and designing technology that replaces fragmented workflows with integrated, scalable systems. Track record of build/buy evaluation leading to adopted architecture decisions, end-to-end systems integration across ERP, workflow, and reporting platforms, and defining metrics that give operations teams genuine visibility into their work. Designed enterprise-scale financial and operational workflows including procure-to-pay, GL validation, invoice matching, and ERP-integrated closure. Brings a process-first discipline: understand the business outcome, map the workflow, define the data requirements - then build or integrate the technology. Holds a BSc in Computer Science, enabling direct engagement with engineering and architecture teams on data modeling, API design, and platform integration without a translation layer.

CORE COMPETENCIES

Internal Tools & Operational Technology Product Management

Systems Integration & Data Flow (ERP, API, Pipeline Design)

Build/Buy/Configure Evaluation & Architecture Decisions

Process Automation & Workflow Replacement

Enterprise Data Management & Master Data Governance

Technical Product Management (CS Degree)

Embed-with-Operations Discovery & Requirements

Data-Driven Product Decisions & Metrics Design

Agile Delivery & Backlog Management

Cross-Functional Stakeholder Alignment (Engineering, Operations, Finance, Vendors)

Azure DevOps | Power Apps | SAP | Power BI | Maximo / MAS | MS Fabric

Business Case Development & Financial Modeling

WORK EXPERIENCE

AltaGas Ltd.

April 2025 - Present

Lead, Business Solutions | Operational Technology & Product Strategy · Calgary, AB

- Evaluated major platform migration architecture - structured hosting model (Hybrid Cloud vs. SaaS), implementation approach (Upgrade vs. Blank Slate), and migration strategy as independent build/buy/configure decisions; drove executive alignment on all three after the program had been stalled for two years
- Designed a Microsoft Fabric data strategy for operational reporting - evaluated data pipeline architecture, integration patterns between the Maximo platform and enterprise data sources, and reporting layer design to enable evidence-based investment decisions
- Established an Azure DevOps delivery framework with a five-level work hierarchy (Epics → Features → User Stories → Test Cases → Defects), backlog traceability standards, and outcome-based metrics - replacing ad-hoc tracking with a structured, auditable delivery system
- Built and presented the business case for platform governance to executive leadership, framing manual workflow debt (200+ hours of rework from poor original workflow design), technical debt, and platform adoption gaps as measurable operational risk requiring technology investment
- Defined product adoption metrics (500+ active users, ~100 average daily logins) and presented engagement gaps as investment risk - linking platform underperformance to organizational, technical, and process root causes
- Led a cross-functional delivery team through tripled demand and reduced capacity, maintaining delivery quality through backlog prioritization, intake governance, and structured stakeholder alignment

TC Energy

August 2021 - September 2024

Liquids Portfolio Product Manager | Customer Engagement & Product Strategy · Calgary, AB

- Served as Application Stream Lead on the TC Energy / Southbow spinoff - evaluated the planned AWS and SAP architecture for a 600-person company; recommended migrating to Azure and Dynamics 365 based on organizational scale, Power Platform interoperability, and total cost optimization; recommendation accepted as company platform direction
- Designed an integrated data approach connecting demand intake (Power Apps), budget management (SAP), and portfolio reporting (Power BI) - replacing manual handoffs between systems with a single end-to-end data pipeline providing visibility from business request to funded and delivered outcome
- Built a behavioral analytics model on product adoption data - analyzed ticket volume, origin location, and user demographics to discover that areas with zero tickets had access barriers and systemic distrust rather than healthy adoption; findings changed how IT leadership measured and invested in platform health
- Developed commercial schedule compliance performance metrics from the ground up - defining data sources, calculation methodology, and visualization to give the business its first structured visibility into contractual delivery performance
- Designed investment governance framework from blank page - defined intake SLAs, prioritization criteria, business case standards, funding thresholds, and reporting cadences; gave the organization consistent visibility from intake through funded execution
- Embedded with Engineering, Operations, Supply Chain, Projects, Reliability, and Commercial functions across five business units to identify product priorities, pain points, and investment opportunities - translating operational needs into technology requirements and roadmap decisions

222529 Alberta Inc. (Independent Consulting)

November 2019 - August 2021

Director, Business Analysis | Digital Transformation Programs · Calgary, AB

- Built intake and evaluation frameworks for a \$14M portfolio of digital transformation investments - defined prioritization models, business case standards, go/no-go criteria, and build/buy/partner criteria for technology decisions
- Conducted financial modeling (ROI, NPV, cash flow) for technology investments, validating projected value against budget constraints and implementation complexity
- Facilitated alignment between operational stakeholders and technical delivery teams - defined pilot scope, success criteria, integration requirements, and data ownership before programs launched

Keyera Corporation

July 2014 - November 2019

Senior Business Analyst / Program Lead | Enterprise Asset Management & Reliability · Calgary, AB

- Designed enterprise-scale financial and operational workflows - procure-to-pay, GL validation, inventory management, approval authority, invoice matching, and ERP-integrated closure - across 26+ facilities, aligning field operations, Supply Chain, Finance, and IT on a single integrated process model
- Designed the enterprise asset and location naming standard - governed equipment naming, functional locations, asset hierarchies, and identification structures across 26+ facilities and multiple enterprise systems, improving data consistency, reporting accuracy, and cross-system integration
- Led requirements gathering and future-state process design across work management, reliability (defect management, failure identification, improvement initiatives), and asset lifecycle (creation, modification, retirement) - embedding with Operations, Engineering, Maintenance, Reliability, and IT stakeholders across multiple sites
- Identified fragmented ownership across platform and product capabilities and proposed a capability-based team model - brought together Business Analysts, Functional Analysts, and Technical Analysts into a unified product function; leadership implemented the model, which grew from 3 to approximately 10 people

Team Lead, Maximo Support

2012 - 2014

- Led the operational support function; designed intake, prioritization, and escalation processes; built relationships with field operations teams that transformed platform trust and user adoption

Shell Canada Ltd.

2012 - 2013

Service Operations Management Analyst

- Built KPI frameworks and performance reporting; identified process improvements contributing approximately \$90K in annual cost savings

EDUCATION

Bachelor of Science, Computer Science

University of Manitoba

Certificate, Product Management
